Backup for demanding users - in medium-sized and large enterprises

SEP's Hybrid Backup solution is designed for heterogeneous IT-infrastructures of any size. SEP securely and reliably protects your company data and supports all virtualization platforms, operating systems, databases and applications, including SAP S/4 HANA.

Visit www.sep.de/sap for further information about the protection of SAP HANA, including **Whitepapers** and **Video Tutorials!**
Also available at the SAP Store!

SEP sesam provides Business Continuity

SAP solutions are the centerpiece of IT-environments for companies and organisations worldwide. SAP systems manage all types of information from sales and customer relationships to finance and business operations.

The importance of these systems requires a comprehensive business continuity management strategy, focusing on Recovery Point Objectives (RPOs) and Recovery Time Objectives (RTOs), which are essential in a disaster scenario.

This is where SEP's unified data protection is vital. The SAP certified Hybrid Backup and Bare Metal Recovery Solution prevents data loss and can recover the entire SAP environment after a disaster scenario like:

- Force majeure
- Hardware failures
- Human errors
- Data corruption
- Logical and software errors

With SEP sesam, data is protected 24/7 and is always available. SEP's reliable backup solution offers numerous certifications for SAP environments and has been SAP Certified since 2002. It is the only backup solution that is certified for SAP HANA on Intel- and IBM Power platforms as well as SAP NetWeaver installations. SEP's versatile and economical data protection is ideal for both medium and large enterprises.
